

SHADOW

SHADOW

SHADOW...OUR FLAGSHIP
AND WINNER OF THE 2012 BEST DESIGN OF THE YEAR AWARD

KEITH's Shadow road frame follows the SUPERBIKE design philosophy. CAD Frame modeling and stress modeling transferred to CNC machined stainless steel moulds convert to a very special design with a special emphasis on the front and down tube. The front acts like a motorcycle fairing, providing the rider with undoubtedly the best low-drag aero frame available in high end road bikes today.

The Shadow offers a streamlined shape, advanced aerodynamics for low drag and structural reinforcements of the frame all beautifully packaged in an incredibly strong yet lightweight design.

Practical frame strength, ultra stiffness and just plain beauty, the perfect combination gives the Shadow the looks and attitude of the thoroughbred it is.

Keith Shadow... there can be only one...
